PERSONAL INFORMATION

BIRTH PLACE
İstanbul / Turkey
BIRTH DATE
26 August, 2000

WORK EXPERIENCE

● **April 2022 - Present**

Impakt Inc. | California, U.S

Full Stack Developer

In this position, a team of 3 people was led by me.

- Centralized services were developed for the products: NestJS, Open API, SQL usage, security middleware, writing unit tests with Jest, and data management with REST.
- A Discord bot was developed: transferring requests opened from Discord to Freshdesk, using Discord.js, Redis, and Freshdesk API, using AWS Lambda and API Gateway. To help the customer support team, 5000 tickets were successfully transferred.
- Ensuring uninterrupted login across products: cookie sharing was provided for subdomains.
- A domain routing middleware application was developed: using Next.js middleware and Vercel Edge Functions, to make linking across the start-up's products more readable and memorable through custom domains, for marketing opportunities.
- A social platform application for the web was developed: using Typescript and React, allowing users to create customizable groups, view in-game leaderboards and upcoming events, and integrate with other products (through deep linking and bridge connections).
- A single-page application listing products for the marketing department was developed: using SolidJS, and connected to a CMS using the Sanity service.
- A web application containing information and privacy policies: using Next.js, published through Vercel, with the advantage of SSR for SEO.

● **January 2022 - April 2022**

Ego Lounge | West Bloomfield, U.S

Mid-Level Full Stack Developer

- Providing access to user data for gaming platforms: OAuth2 and Auth0 integrations were provided with Passport.js.
- Saving data to the database: Firebase Authentication and Cloud Firestore integrations were provided.
- Frontend development: Next.js and styled-component libraries were used.

● **Dec. 2020 - March 2021**

Curbfood.se | Stockholm, SE

Junior Mobile Developer

- User profile page: implemented with React Native, styled-components, and the Firebase Authentication service, including login and registration processes.
